Insights

1. Revenue is heavily concentrated, with our top 3 customers accounting for ~71% of total revenue. "GreenEnergy Corp" alone represents ~32% of our business.
2. Repeat customers represent 50% of our customer base but generate ~65% of revenue, demonstrating their outsized value. Interestingly, "PharmaCare Solutions" (despite being a one-time buyer) ranks as our second-highest revenue customer at \$12,500. Converting them to a repeat customer represents our single largest revenue growth opportunity.
3. COVID test kits lead in revenue at \$16,750 (~28% of product revenue). However, car batteries present a compelling opportunity with only 128 units sold, they generate \$15,234.83 (~25% of product revenue), representing an 82% higher revenue-per-unit (\$119 vs \$24). This suggests we can drive significant revenue growth with lower volume, higher-margin products.

Recommendations

1. Convert "PharmaCare Solutions" from a one-time \$12,500 buyer into a repeat customer.
2. Car batteries generate \$15,234.83 in revenue with only 128 units sold. Leverage this for upselling to existing customers.
